

Edgefinity IoT

Safety & Security Solutions for Schools

Edgefinity IoT offers peace of mind to parents and their children at school, while facilitating communication between teachers, administration, public safety agents, and the school. Intelligent use of RFID technology enhances the children's security, allowing parents to track their children's bus to and from the school, providing them with immediate notification on deviation from the expected route.

Welcome to the leading edge of safety and security technology.

IMMEDIATE ALERTS

If a child isn't where they are supposed to be, Edgefinity IoT sends out alerts immediately.

RAPID R.O.I.

With Edgefinity IoT, you can avoid potential costly issues such as serious injuries, lawsuits, and other incidents

EAGLE EYE VIEW

Reduce risk by ensuring every member of staff is alerted to a problem. The safety of children is the top priority at all times.

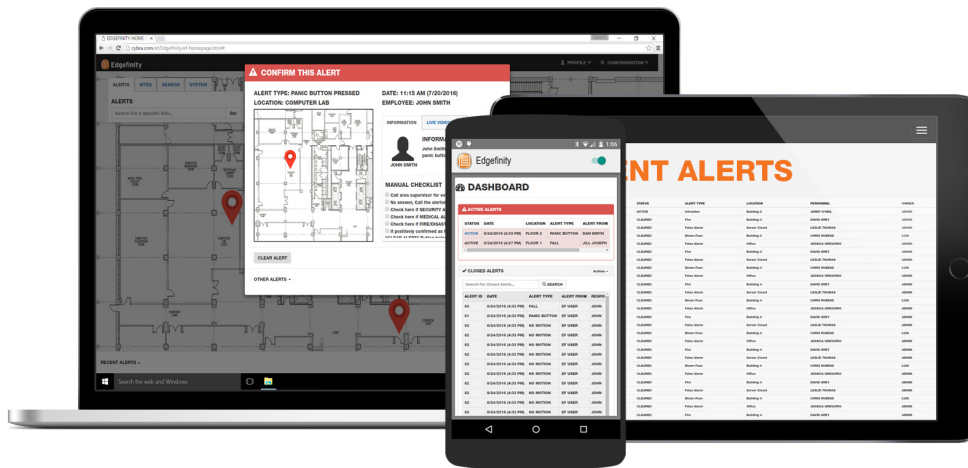

SMART REPORTING

Edgefinity IoT ensures every incident is taken care of effectively. Edgefinity IoT also records how every incident was handled for archiving.

SAFETY & SECURITY ENSURED WITH ONE SIMPLE SOLUTION.

School safety is the paramount concern when parents entrust their children to educators. When an emergency happens, you need real-time situational awareness to be able to act effectively. Edgefinity IoT can give you a boost in locating lost children, knowing when an accident has occurred, and ensuring teachers are always in touch with responders.

With Edgefinity IoT, raise school safety standards for children, teachers, and staff.

CHILDREN CALLING SYSTEM

Children don't need to wait by the door for their parents. As parents arrive and put their ID card on an external RFID reader, the name of the child and his class can be automatically announced on the school public address system.

ONLINE PORTAL

Facilitating parents' communication with the school's staff is an essential part of the children's security. Edgefinity IoT includes a portal to send alerts to parents, including SMS, linking parents to the portal.

ARRIVAL AND DEPARTURE

Parents automatically receive an SMS or email if their child does not arrive on time or leave school earlier than scheduled. Parents can use the portal to advise the school on a planned late arrival

SAFETY ON BUSES

If a child fails to get on or off the bus at the appropriate stop, a message will automatically be sent to the driver. If not rectified quickly, SMS alerts are sent to parents and dispatchers.

SECURITY BREACHES

Each teacher and staff member wears a trackable ID badge equipped with a panic button to call for help in case of a health emergency or intruder.

CHILDRENS' TAGS

Keeping kids safe is always the top priority. Children's tag can be used by the school as an internal ID in the lunchroom, library, infirmary, on school buses and so much more.

DEVELOPED BY CYBRA CORPORATION

CYBRA has over 10 years of experience in RFID software development and technology. Since 1985, CYBRA has been solving some of the most vexing auto-ID challenges in the world. Edgefinity IoT is a complete safety solution for any organization.

Contact us today to learn how Edgefinity IoT can make your staff and facilities safer and more secure.
