

MarkMagic® 11

The next generation of barcode labeling software is here.

Introducing the Latest Version of MarkMagic

All new MarkMagic 11 has been designed to simplify mission critical tasks. We've added several features to make MarkMagic 11 the enterprise output transformation solution of choice – from label and forms creation, to integration, production, and management.

The entire CYBRA team is excited to bring this latest version of MarkMagic to our customers to increase their investment and to help solve modern challenges.

New Data Sources

MarkMagic now supports source data printing from CSV, XML and JSON files. Print jobs can now be directed to obtain their source data from CSV, XML and JSON files located on the Integrated File System (IFS).

New PrintMonitor

With the newly added support for CSV, XML and JSON data input, the MarkMagic Print Monitor addon has been enhanced to allow monitoring of IFS folders for these new file types.

New Output Types

MarkMagic can now print directly to an image file. Your MarkMagic label and form prints can be output as JPG, GIF and PNG files on the IFS. Scaling, rotation and color of the resulting image file is supported as well.

New Language Translation

Define your own custom table of word replacements to assist in multi-lingual label support. *HEADING static text fields on your MarkMagic formats can now be automatically translated to any language that you define.

Zebra Diagonals Lines

Define diagonal lines on Zebra labels. CYBRA makes it even easier for you to now meet ever-changing industry compliance mandates.

Save Print Data

MarkMagic can now save auto-generated data, such as serialized item details, to a file for easy recall. Access unique print data for past items, orders, and more, anytime you need it.

■ = MarkMagic PI only

Larger Field Name Size

MarkMagic PI now supports variable field names up to 64 characters, providing more room for detailed, precise data labeling.

XML Structure Support

MarkMagic PI print APIs now accept multiple XML structures, including Software formatted XML files. This makes transitioning from Software to MMPI smoother than ever.

New Core Components

With major updates to core components like Log4j v2, WOW 7.8, and H2 database v2.2, MarkMagic 11 ensures faster, more secure, and more reliable performance.

MarkMagic Benefits

- + **All-in-One Solution:** Design, manage, and print labels, forms, and RFID tags from one powerful platform.
- + **No Programming Needed:** Create complex documents and automate printing without writing a single line of code.
- + **Fast Compliance:** Access a huge library of prebuilt formats for retailers, shippers, and regulatory standards.
- + **Seamless Integration:** Easily connect to ERPs, WMS systems, and business applications like IBM i, NetSuite, and more.
- + **Dynamic Print Management:** Automatically adjust documents based on data rules, users, time, or location.
- + **Cloud or On-Premise:** Deploy where it fits your business best—on the cloud, on-premise, or hybrid.
- + **Supports Major Printers:** Compatible with Zebra, SATO, Honeywell, Epson, HP, and dozens more.
- + **Powerful Add-Ons:** Expand capabilities with options like PrintTransformer, FormWeaver, and PrintMonitor.
- + **Speed and Accuracy:** Generate forms and labels on demand, cutting downtime and eliminating manual errors.
- + **Trusted by Top Brands:** Used by hundreds of manufacturers, distributors, and retailers worldwide.

Upgrade to MarkMagic 11 Today

Packed with cutting-edge features and powerful tools, MarkMagic 11 makes designing and printing barcode labels, electronic forms, reports, and RFID tags a breeze. Upgrade to MarkMagic 11 today for free—and unlock the ultimate printing experience!
