[MarkMagic Add-On] PrintMonitor

No Source Code? No Programming Resources? No Problem.

Want to eliminate excessive programming? PrintMonitor can do just that. What could be easier than telling MarkMagic to automatically run a MarkMagic Job when a spooled file appears in an Output Queue or when a record is added to a file?

PrintMonitor is ideal if you have no source code available or you don't have the time or resources to change source programs.

Automated Printing

The PrintMonitor add-on watches output queues for spool files and watches physical files for added records. Files that meet user-defined criteria can be automatically printed.

Label Compliance

Industries that ship directly to the consumer, require that the shipping doc contains both a pick ticket and a FedEx Ground or UPS carrier label with a 2D bar code.

Use Any Printer

You no longer need a thermal barcode label printer to print 2D barcode labels. Using the 2D add-on a standard laser printer can become a full featured bar code label printer.

Value

Using the MarkMagic PrintMonitor Option is the fastest, easiest way to integrate labels, RFID tags or forms into your applications.

You can concentrate on designing documents that fit your business requirements without worrying about any programming at all.

Recommended Application

- » Invoices and statements
- » Shipping documents
- » Pick tickets
- » Bar code and RFID labels
- » Garment tickets
- » UCC 128 compliance labels
- » Any MarkMagic document

Automated **Printing** Capabilities

The powerful MarkMagic PrintMonitor Option watches output queues for spool files and watches physical files for added records. Files that meet user-defined criteria can be automatically printed.

Prerequisites

- » MarkMagic 5.1 or later
- » OS/400 V4R5 or later
- » Any supported MarkMagic printer

Recommended Application

- » Invoices and statements
- » Shipping documents
- » Pick tickets
- » Bar code and RFID labels
- » Garment tickets
- » UCC 128 compliance labels
- » Any MarkMagic document

Benefits

PrintMonitor is ideal when source code isn't available—or when there's no time to modify programs. It watches output queues and physical files for activity. When a spool file or record meets your criteria, PrintMonitor automatically runs the right MarkMagic job to print labels or forms.

No programming or source code changes needed. Just design your form, create a job, and set up one or more monitors. You can trigger printing based on spool file attributes like File Name, Output Queue, User, Form Type, and more. Use it with any application to achieve powerful results—without touching your code.
